DETAILS
- One file is created for the export: Specials.txt. This should be the same file that will be imported into the other Tax database.
- 2006 bytes/record, including CR/LF
- 1st byte is position "1"
- One record per parcel
- A header record precedes the data set
- Each record is delimited by a carriage return (x'0D') and line feed (x'0A')
- This is a fixed-field export. Fields are continuous, with no delimiters.
- Regarding numeric fields: the figure to the left of the decimal is the total character count, including the decimal and the figures to the right of it. For example, when you see a "Size" of 12.2, the field contents will show 9 figures to the left of the decimal, 2 figures to the right.
